School Safe Zones - Kenya

What do you expect to find at your children’s school building?
- A roof?
- Classrooms?
- Bathrooms?
- Clean water flowing from faucets?
- Drinking fountains?

We would never dream of sending our children to a school without a solid building structure, plumbing and electricity. But this is the reality for many students worldwide.

(Display the “before” picture.)

Not too long ago, Gosese Primary School in rural western Kenya, was holding open-air classes. Animals and people wandered through the school, interrupting class time. Students didn’t have access to clean water or adequate sanitation facilities. And they weren’t performing well on tests.

I’m proud to say that because of churches like ours, the school is now a safer, more welcoming space.

(Display the “after” picture.)

Now there is a new school building. They have two water tanks, a fence made of trees, a locked gate and toilets. Not only does the campus look better, but the community feels stronger and more confident. The community even has their first class of students who are in secondary school!

Doesn’t every child deserve a school with a toilet, a roof and clean water? Doesn’t every child deserve a safe, attractive learning environment? With your help, we can reach more children with CWS School Safe Zones. With your help, more communities can solve today’s struggles for tomorrow’s leaders. Together, we can create more smiles and more success stories.

Will you be a part of this?

(We suggest taking an offering while displaying the third photo or telling your congregation how they can support CWS School Safe Zones.)
CREATE THE NEXT SUCCESS STORY!
