

WATER & SANITATION

Access to safe water is at the very heart of a community's ability to thrive. Without the precious resource crops wilt, animals die, people suffer and diseases spread.

Improved sanitation (hygienic latrines and toilets) is a critical need for a healthy community. Ending open defecation means cleaner water and less disease.

Our global community has made extraordinary progress towards ensuring clean water and adequate sanitation for all. However, too many people worldwide remain unable to access one or both.

CWS supports communities as they build and maintain water systems and hygienic latrines. Together, we can ensure that more people have an opportunity to live healthy lives and fulfil their potential.

CLEAN WATER & IMPROVED SANITATION: GLOBAL PROGRESS

2.6 billion people gained access to safe drinking water between 1990 and 2015.

2.1 billion people gained use of improved sanitation between 1990 and 2015.

GLOBALLY, 31% AND 34% OF SCHOOLS LACK ACCESS TO ADEQUATE WATER AND SANITATION, RESPECTIVELY.

CLEAN, SAFE WATER. HYGIENIC LATRINES. TOGETHER, WE CAN MAKE THIS A REALITY FOR ALL.

All statistics are from the World Health Organization.
